

Conserving water

Crop irrigation depends solely on rainfall and, where necessary, augmented with irrigation using on-location pumped well water.

The distance from the fields to our manufacturing base can be as close as 30kms, minimising our carbon footprint of raw material transportation.

Concentrated flavour

A concentrated extract enables us to ship all over the world with a lower impact on emissions.

a sustainable approach

Recycled packaging

Our supplier collects and reuses the card bins and pallets, resulting in lower emissions and costs.

Re-purposing waste

100% organic waste is returned to the field (pulp and wastewater) for use as a fertiliser, returning nutrients to the soil.
