

# Honey

## a circular approach

The supplier collects the effluent which then goes into pet food supplies and as a food source for bees during the winter seasons to reduce issues with colony collapse

Pure honey is delivered in totes to our US facility from honey suppliers

Our team of experts apply our proprietary technology to result in a 100% natural aqueous distillate

100% of our honey effluent is placed back in the totes we received it in, ready for collection by the supplier
